

Re-vaccination against COVID-19 is recommended in every pregnancy.

The mRNA COVID-19 vaccines are as safe as other vaccines

The mRNA vaccines cannot change your DNA; they only deliver information. The vaccines teach your body how to make a protein that triggers an immune response.

**WARNING: This dangerous advice is still on the WHO website as at May,31, 2024**

World Health Organization

There is growing evidence that children can be safely vaccinated against COVID-19

The risk of serious disease is low in healthy adolescents and young children. Vaccinating them is a lower priority than protecting health workers, older adults, and adults and children with underlying health conditions that increase their risk of serious COVID-19.
